

YOUR DATA COULD BE GONE IN A FLASH!

It takes only milliseconds for line noise, brownouts, spikes, surges or blackouts to cause hidden data errors, full data loss, a system crash or even permanent damage to sensitive computer circuitry. And studies show that these disturbances occur an average of 128 times every month.

Protect yourself from data loss and hardware damage with an Uninterruptible Power Supply from United Electric Supply. UPS equipment conditions incoming electricity to guarantee a clean, consistent flow of power, while allowing for continuous operation or controlled shutoff during blackout conditions.

United Electric Supply has the experience and the technical expertise to help you choose the most efficient and cost-effective system—whether your business uses a single digital cash register or rooms full of mainframe equipment.

In addition, we supply a complete range of power conditioning equipment including surge suppressors, voltage regulators, ultra isolators and power conditioners, so no matter what your particular needs are, we have the equipment and the expertise to help you.

And since we're headquartered locally, and keep most necessary parts in inven-

tory, our product specialists can ensure prompt availability for everything we sell.

Call us toll free for a no-obligation consultation. We'll tell you more about how United Electric Supply can meet your needs for reliable, clean, uninterrupted power, protecting your equipment—and your business.
