

Let your imagination set the limits, not your materials.

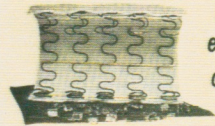

By replacing springs, coils, clips, webbing, padding and decking, Du Pont DYMETROL® fabric gives you the freedom to venture into exciting new territory, creating innovative designs that can be produced efficiently and economically. ■

DYMETROL allows you to dramatically reduce the sheer bulk necessary in conventional furniture, and create thin, complex styles that are as comfortable to sit on as they are beautiful to look at. ■

In addition to this inherent design flexibility, DYMETROL provides an ease of handling that enables you to move more quickly from drawing board to prototype, and ensure that the finished

piece "sits" exactly as designed. ■

And DYMETROL

is resistant to tears, exhibits excellent dimensional stability, remains unaffected by climatic extremes of temperature and humidity, and can't rust like metal springs. With DYMETROL, your designs will last and last, providing years of beauty and comfort in the homes of today's quality and image-conscious consumers. ■

For more information and free samples of this revolutionary fabric, call 1-800-222-1577, Ext. 90, or write to: Du Pont DYMETROL®, Room

X-51019,  
Wilmington,  
DE 19898.

You'll soon see that the possibilities are as boundless as your imagination. ■
